

DRIENCOURT AMÉDÉE

Engineering or materials masters

About Me

I am a young student in Science and Engineering, pursuing a Bachelor's degree in Materials Science and Engineering (BUT), while also being a high-level athlete in Track and Field

+33 (0)626513129

dedeausore22@gmail.com

47 Rue Mouexigné
22400 - Lamballe-Armor
France

Languages

- French (native)
- English (B2)
- German (basics)

Expertise

- RTM/SMC Process and other
- Technical Drawing (SolidWorks)
- DSC/ATG/ATD
- Tensile and Bending Test Bench
- Shaping of Polymers, Metals, and Glass and Ceramics

Experience

Process Technician in Composite Materials Apprenticeship

Forvia - St Méloir des Ondes

2022 - 2024

Development of composite parts using RTM and SMC for luxury automobiles ; Creation of work documents and operator training ; Industrial Project Management ; Manufacturing of spare parts ; part inspection...

Receptionist at Lamballe-Armor Swimming Pool Student Employee

2022 - 1 month

Customer Reception ; Cash Register Management ; Pool Cleaning ; Activity Management

Drive-Through Employee Student Employee

Leclerc Lamballe-Armor

2021 - 3 months

Discovering the professional world ; Working in a team ; Interacting with clients ; Order Picking and Inventory Support

Education

Bachelor's Degree in Materials Science - 2024/2025

IUT de Saint-Brieuc - University of Rennes
Chemistry and Mechanics of Materials: Metals, Glass and Ceramics, Polymers, and Composite Materials
Course in Composite Materials Industrialization

Associate's Degree in Materials Science - 2022/2023

IUT de Saint-Brieuc - University of Rennes
Materials Development ; Eco-design ; Shaping of Materials ; Characterization

General High School Diploma _ 2019/2025

St Joseph High School of Lamballe
Specialization in Mathematics and Physics - Advanced Mathematics and Latin Option

University Project

Preparation of YBaCuO Superconductor

- Literature Review to Determine the Elaboration Parameters
- Co-grinding of Precursors and Pelletizing
- Testing of Different Temperatures to Determine the Optimal Sintering Conditions
- Density Measurement using a Hydrostatic Balance
- XRD Analysis and Peak Indexing
- Meissner Effect Test to Assess Superconductivity

Design and Fabrication of a Domestic Wind Turbine using Composites

- Design of Molds and 3D Printed Cores
- 3D Printer Setup for Supporting Infusion (Vacuum Pull and Exothermic Reaction)
- Choice of Forming Method (Vacuum Contact or Infusion)
- Selection of Fabrics Based on the Specifications (Mechanical Stress and Cost)
- Manufacturing of Parts and Assembly

Manufacturing of a Norwegian Pot using Agro-materials

- Create a Design and Cut the Wood with Laser Cutting
- Testing Insulating Materials Using a Calorimetric Chamber
- Selecting Suitable Materials: Hemp and Recycled Cotton
- Characterize the assembly using a Thermal Camera
